

WI Fire History and Fire Effects Research

Nathan Holoubek and Jed Meunier

Why is fire important in WI?

Bollinger et al. 2004

Knowledge from GLO notes

SEVERE WIND AND FIRE REGIMES IN NORTHERN FORESTS: HISTORICAL VARIABILITY AT THE REGIONAL SCALE

LISA A. SCHULTE¹ AND DAVID J. MLADENOFF

HISTORIC VEGETATION

MAJOR NATURAL DISTURBANCES

- Severity based on GLO tree density within disturbed and undisturbed patches.
- Only sensitive to stand-replacing fire

Fire rotation intervals (yrs):

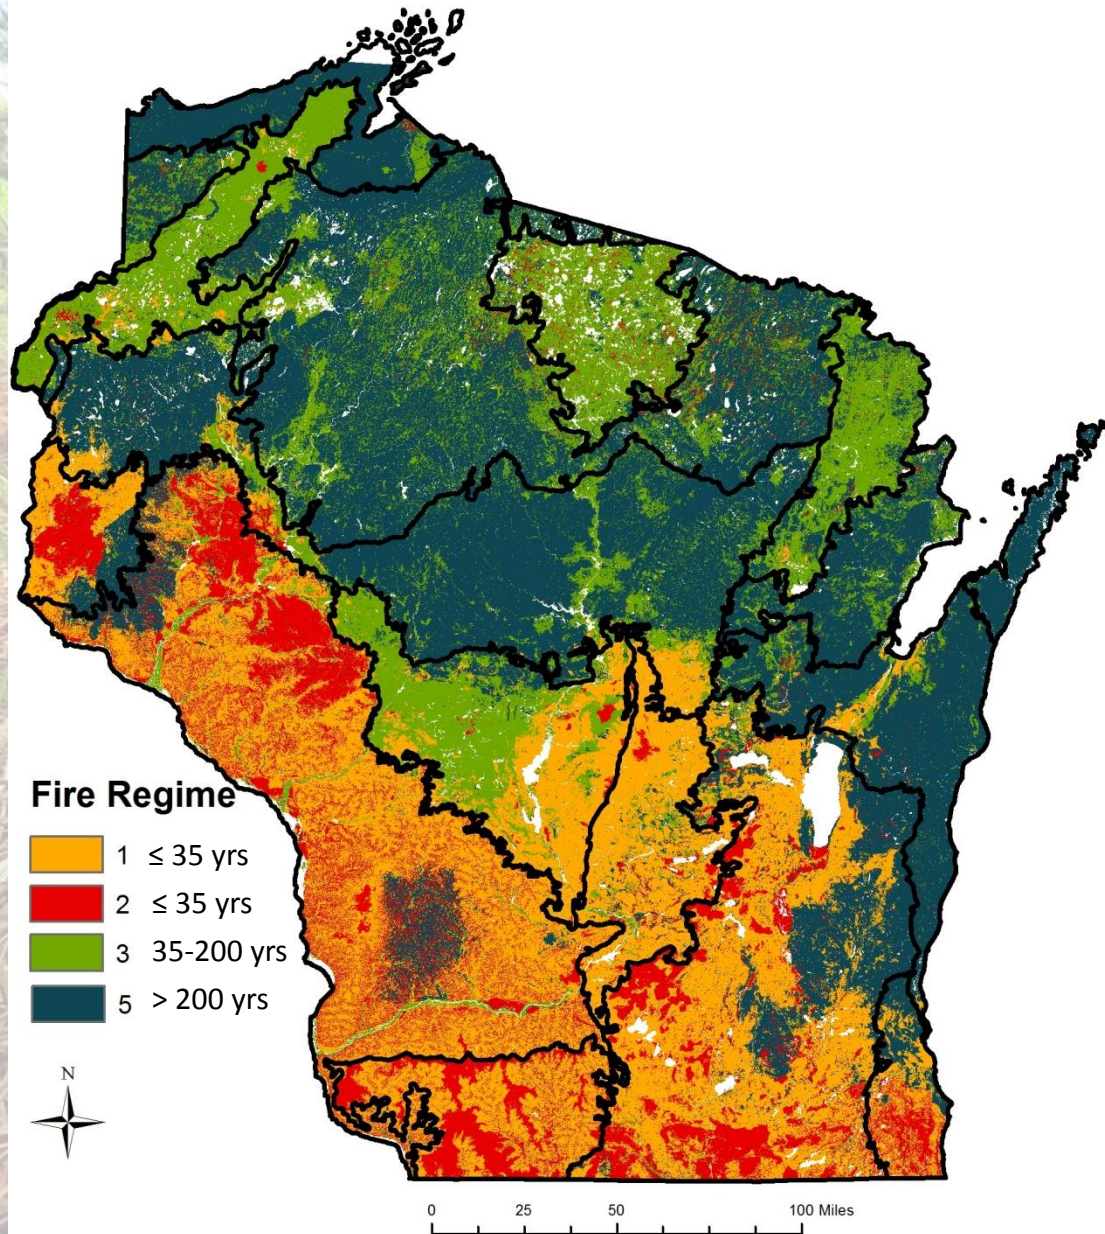

Jack Pine – 488

Red Pine – 810

Aspen/Oak – 1,322

White Pine – 3,029

Landfire BioPhysical Settings

The Physical Evidence

The Physical Evidence

Detailed local fire histories over a large geographic scale

- 11/21 fire history sites (8 m radius plots)
- 5/8 stand reconstructions sites (0.5 ha plots)
- 436 cross sections, 2,380 cores

Historical fires

1932

Southern Pine Relicts

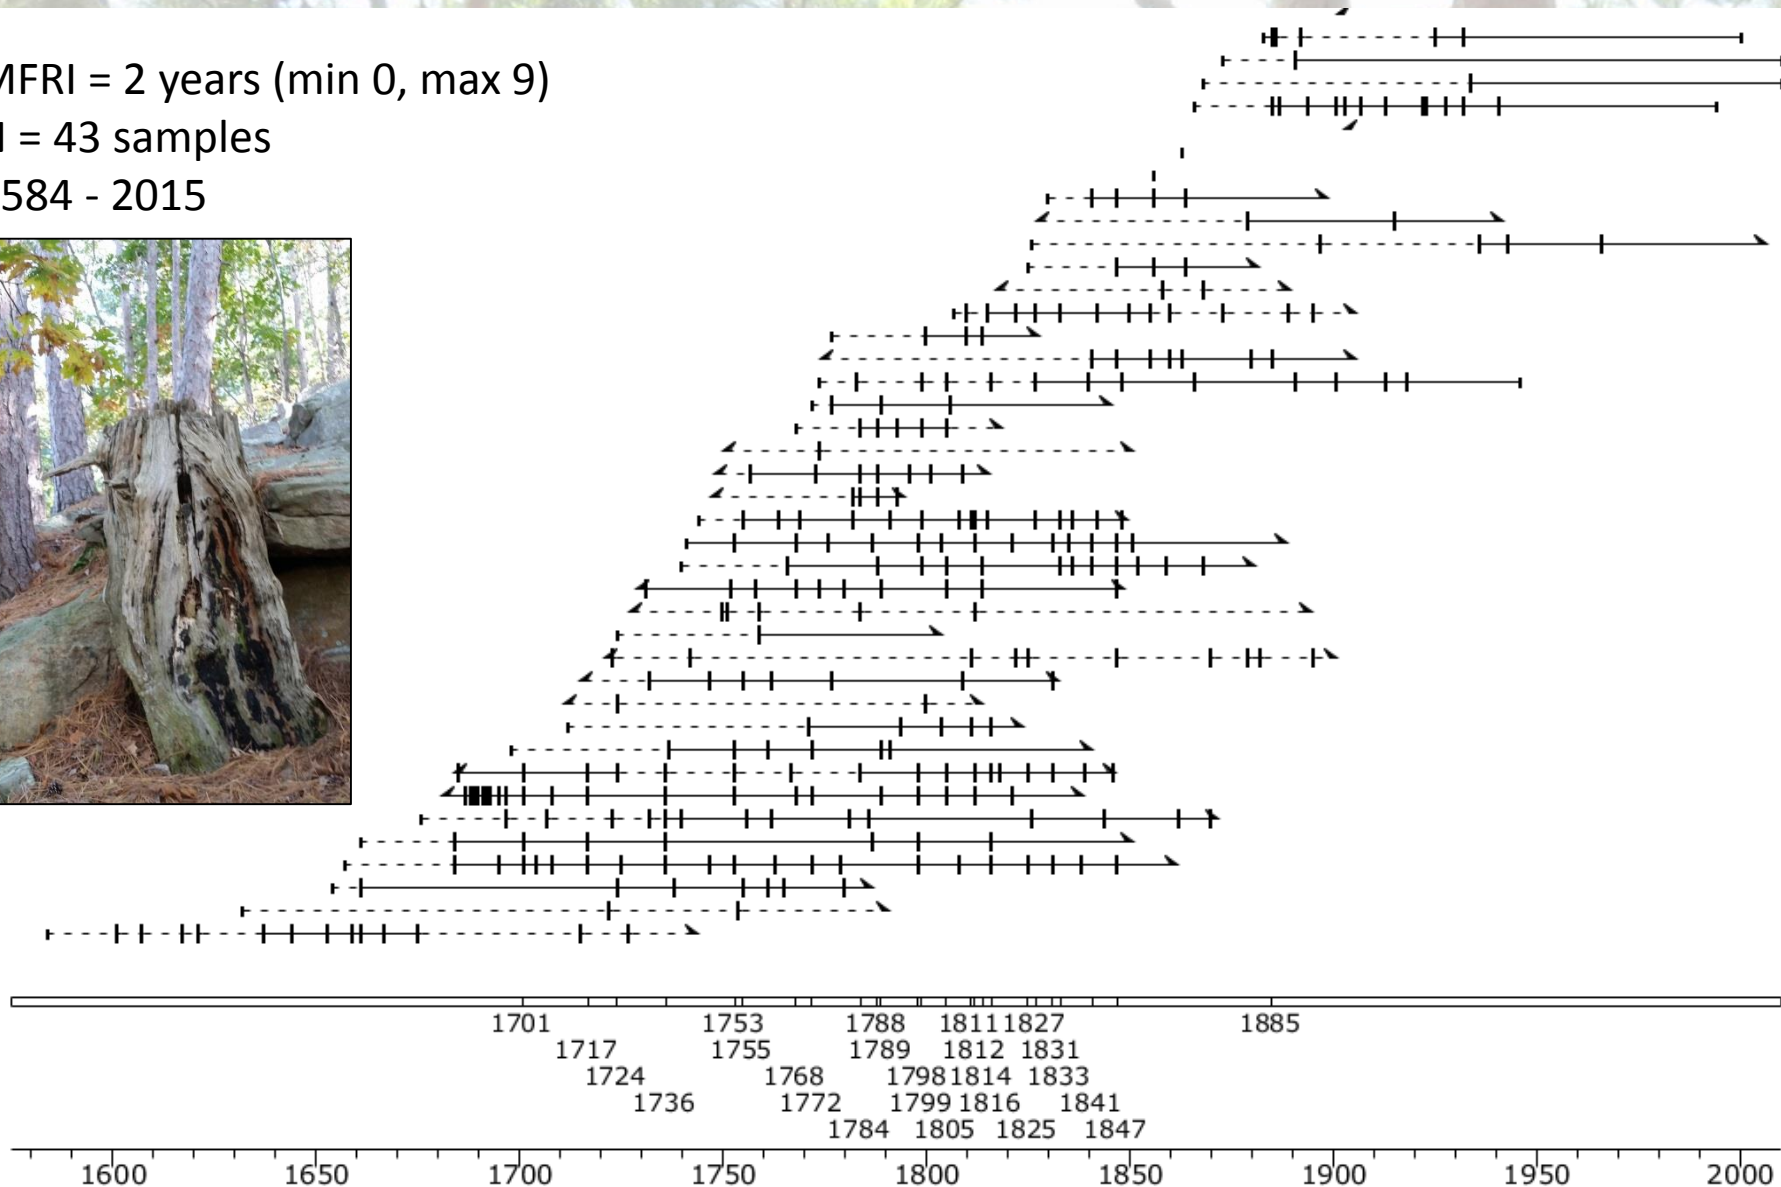

Southern Wisconsin Relicts

MFRI = 2 years (min 0, max 9)

N = 43 samples

1584 - 2015

Northern Pines

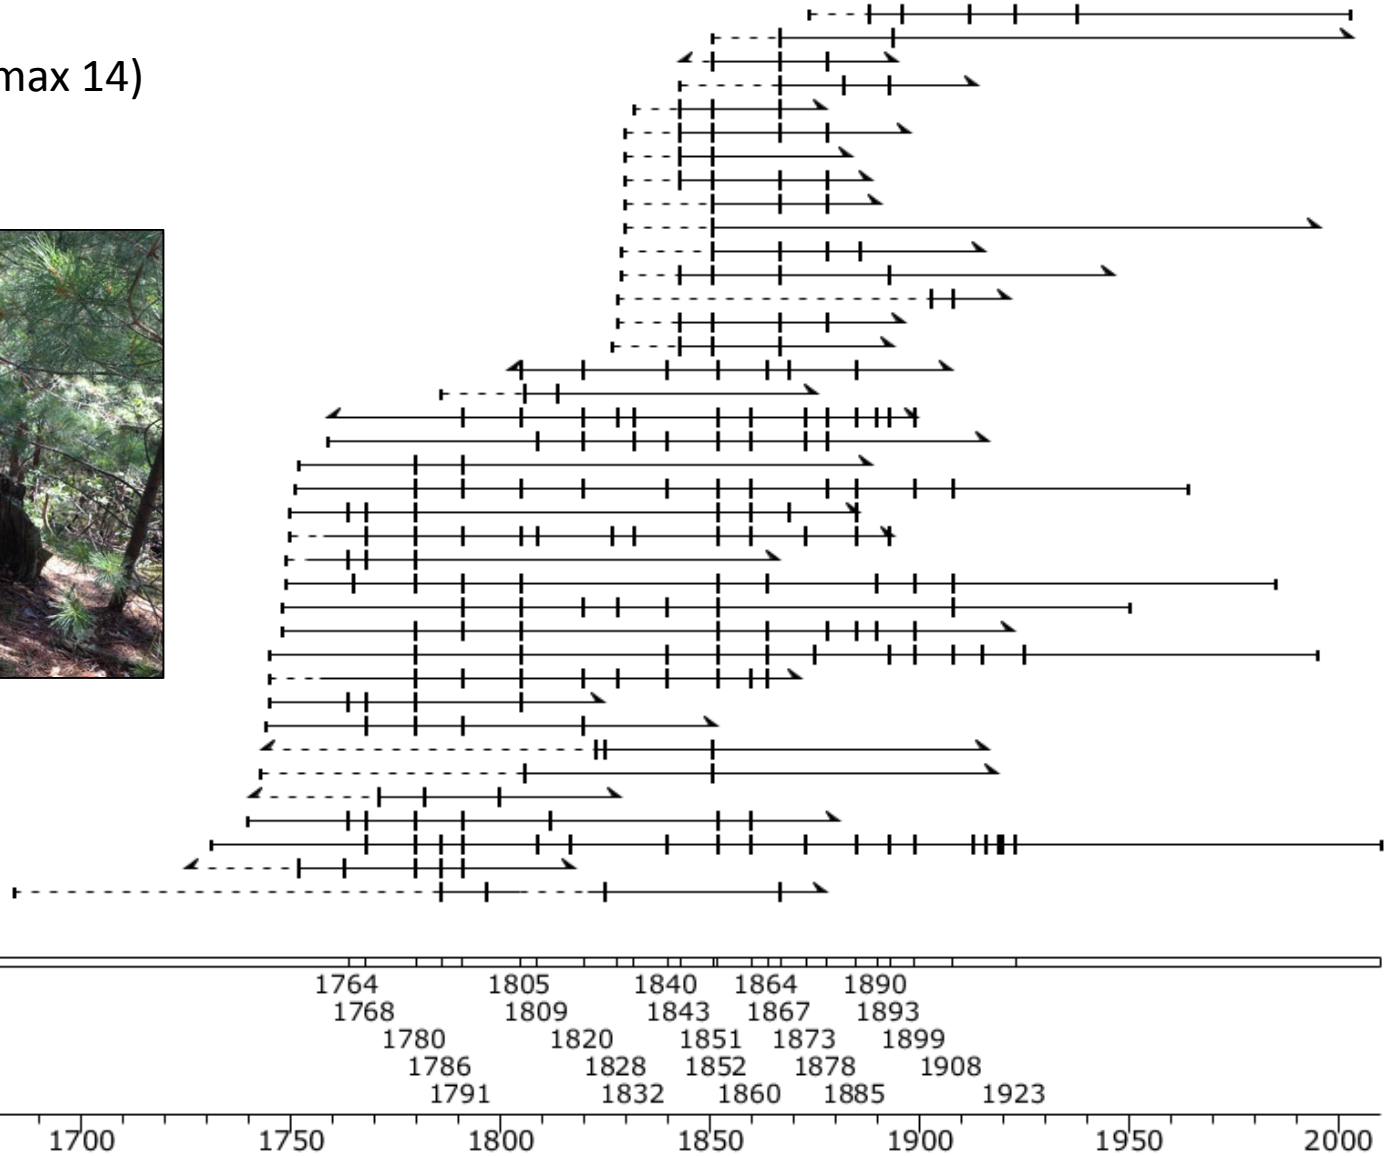

Northern Wisconsin Stands

MFRI = 6 years (min 1, max 14)

N = 39 samples

1684 - 2013

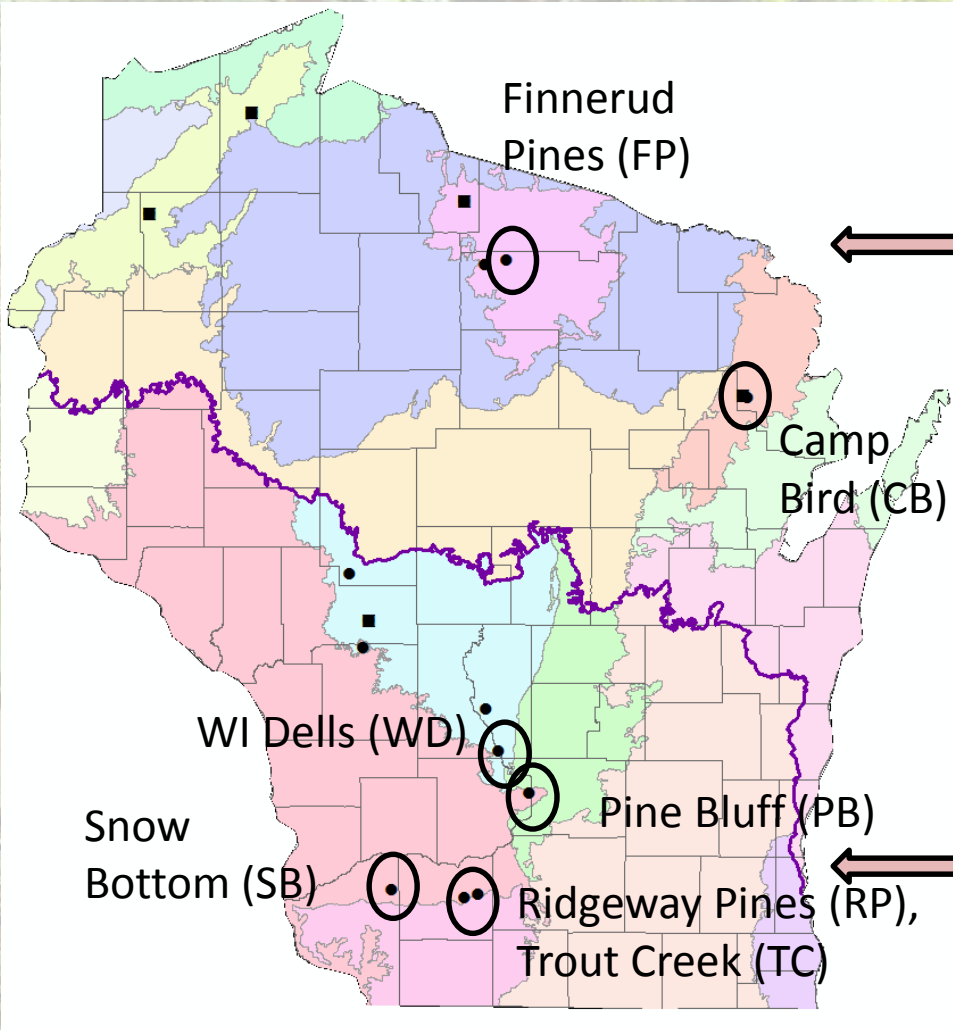

Northern Stands

Fire seasonality

Northern Stands
83% Dormant Season
11% Growing Season
6% Fall

Southern Relicts
42% Dormant Season
49% Growing Season
9% Fall

Are we setting back brush?

NATURAL RESOURCES

PRESC
BURN
AHEAD

- Are we burning in the right conditions to meet minimum objectives?
- Can we alter our burn conditions or seasons to do a better job?

Evaluating fire's effect on brush

- # stems by species and size class before and after burn.
- Follow up measurements assess top-kill and re-sprouting.
- To date: 409 burned survey points

Linking historic patterns with today's opportunities
